

To whom it concerns; please leave the set up for solar and the procedures that are followed as they are. These are some of the reasons we choose to go this route. It was a major investment to help the environment and the economy, by going this direction we have already planted the equivalent of 3000 trees by co2 emissions saved. Please stop messing with things that work! Regulations are already in place that work for each individual set up.

Thanks,

James.
